GEODETTIC CONTROL DATA

Benchmark Descriptions
And Elevations

MARSHALL COUNTY

The layout, surveys, adjustments, and publication of the following level lines have been developed by the staff of the Department of Natural Resources. The monumentation, field surveys, and adjustments were conducted between 1950 and 1993. This publication is based on an extensive re-survey and recovery program conducted in the late 1970's by the Surveying and Mapping Section. It replaces the previous publications of the Indiana Flood Control and Water Resources Commission and Department of Natural Resources published between 1956 and 1977. All field survey records and publication procedures in the process of development of this list may be examined at the office of the Department of Natural Resources in Indianapolis, Indiana. All elevations published to the nearest one-onethousandth of a foot are based on second order or higher order leveling. All elevations published to the nearest one-onehundredth of a foot are based on third order leveling.

May 1993
